Procedure to run the pipeline:

1) Make sure all requirements are downloaded from the requirements.txt file. The python version used for this pipeline is Python 3.11.4. (At least python 3.9+ is required)

2) Adjust paths according to where the folder is saved.
    Position1: In Test_process_data.py inside test_integration function.
    Position2: In Process_data.py inside run_classification function.

3) Make sure the .deflate files are inside the data folder.
